

VariStand™

SPEAKER WALL MOUNTING SYSTEM

Designed for freestanding applications, the VariStand™ is solidly constructed of rugged steel and allows vertical adjustment of the speaker mounting plate from 27" up to 42" above the floor to accommodate a variety of listening and surround sound positions. Special end caps allow filling the base with sand for extra stability. Three point height adjustable feet accommodate uneven floors while helping to keep loudspeaker vibrations from reaching the floor. Elegant contemporary finishes include Black Texture or White Satin.
